Supplemental Allowable Subject Matter

1. Based on a conversation on telephone between the Examiner **Anthony Ton** and Attorney **Leon R. Turkevich** (Registration No. 34,035) on 3/03/2005, there was an error on the Notice of Allowability that mailed to the Applicant on 3/1/2005 because **Claims 12 and 16** were cancelled by the Applicant in the Amendment filed on 2/2/2005. These two cancelled claims should not be included in the allowed Claims 1-19.

Therefore, please discard the previous Allowable Subject Matter and replace that by this Supplemental Allowable Subject Matter as the following of an examiner's statement of reasons for allowance:

a) **In Regarding to Claims 1-6 and 13-15:** The prior arts of record fail to teach a method for testing a network switch chip having an expansion port configured for transferring data according to a prescribed protocol, the method comprising a combination of steps of: generating by the external logic unit a new expansion port frame based on reception of the expansion port frame; and

wherein the receiving of the expansion port frame includes:
asserting by the external logic unit an expansion port receiver request signal, on a corresponding signal path of the expansion bus, to enable the expansion port of the network switch chip to output the expansion port frame onto a single expansion port transmit data path of the expansion bus, the external logic unit asserting the expansion port receiver request signal until detecting a buffer of the external logic unit has been filled; and
storing into the buffer, during assertion of the expansion port receiver request signal, frame data of the expansion port frame received in prescribed bursts via the single expansion

port transmit data path based on a first clock signal received from the expansion port via a corresponding first clock path of the expansion bus.

b) In Regarding to Claims 7-11 and 17-19: The prior arts of record fail to teach a test system for testing a network switch chip having an expansion port configured for transferring data according to a prescribed protocol, the test system comprising a combination of steps of:

an external logic unit configured for generating a new expansion port frame based on reception of the expansion port frame; and

a buffer, wherein:

the external logic unit is configured for asserting an expansion port receiver request signal, on a corresponding signal path of the expansion bus, to enable the expansion port of the network switch chip to output the expansion port frame onto a single expansion port transmit data path of the expansion bus, the external logic unit asserting the expansion port receiver request signal until detecting the buffer has been filled; and

the expansion port frame being received, during assertion of the expansion port receiver request signal, as frame data in prescribed bursts via the single expansion port transmit data path based on a first clock signal received from the expansion port via a corresponding first clock path of the expansion bus.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
